1. The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

2. The second step is to gather information. This includes talking to people who are involved in the problem and looking at any relevant data or documents.

3. The third step is to analyze the information. This involves looking for patterns and trends in the data and trying to understand the underlying causes of the problem.

4. The fourth step is to develop a solution. This involves coming up with a plan to address the problem and then implementing that plan.

5. The fifth step is to evaluate the solution. This involves checking to see if the solution has worked and if it has, how well it has worked.
